PROFESSIONAL SUMMARY

AI/LLM Engineer with a strong software engineering foundation (8+ years, C#/.NET, Python, Node.js) and hands-on experience building LLM-powered applications using LangGraph, CrewAI, and the Model Context Protocol (MCP). Skilled in designing multi-agent pipelines, RAG architectures, and tool-augmented AI systems. Deep backend engineering background means I build AI features that are production-ready — not just prototypes. Experienced in deploying AI-integrated applications to cloud environments with proper monitoring, API design, and scalability.

AREAS OF EXPERTISE

LLM Application Development	**AI Agent Design (CrewAI, LangGraph)**	**RAG Pipeline Architecture**
MCP (Model Context Protocol)	**Prompt Engineering**	**Multi-Agent Orchestration**
Backend API Integration	**Python & .NET for AI Systems**	**Data Pipeline Engineering**
Cloud Deployment for AI Apps	**Tool & Function Calling**	**Real-Time Streaming AI**

TECHNICAL SKILLS

LLM Frameworks: LangGraph, CrewAI, LangChain, MCP (Model Context Protocol)
AI Capabilities: Multi-Agent Systems, RAG Pipelines, Prompt Engineering, Tool/Function Calling, Streaming Responses
Languages: Python, C#, JavaScript, TypeScript, SQL
Backend: .NET Core, Node.js, FastAPI (familiar), RESTful API Design
Data: Elasticsearch, PostgreSQL, Vector DB concepts, data pipeline design
Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, CI/CD
Monitoring: Prometheus, Grafana, Elasticsearch — adapted for AI observability
Tools: Git, Jupyter, Linux, Agile/Scrum

AI / LLM PROJECTS & CAPABILITIES

- Multi-Agent Systems: Built orchestrated agent pipelines using CrewAI and LangGraph — agents with distinct roles, shared memory, and tool access for complex task automation.
- MCP Integration: Implemented Model Context Protocol (MCP) servers to expose structured tools and resources to LLMs, enabling reliable, controllable AI actions.
- RAG Pipelines: Designed retrieval-augmented generation flows with document ingestion, vector search, and context injection for domain-specific AI assistants.
- Tool-Augmented Agents: Built LLM agents with custom tool calling — web search, database queries, API calls, and file operations integrated as agent capabilities.
- Production-Ready AI APIs: Wrapped AI pipelines in robust .NET Core and Node.js APIs with streaming responses, error handling, and authentication.

PROFESSIONAL EXPERIENCE

Talavest | **Full-Stack & AI-Enabled Developer**

April 2025 – Present Remote | Tabriz, Iran

- Designed and developed a production fintech platform with AI-enhanced capabilities for a gold investment ecosystem.
- Built Elasticsearch-powered intelligent search and log analysis — foundation for AI-integrated data querying.
- Developed event-driven microservices architecture adaptable for AI agent integration and real-time decision pipelines.
- Maintained robust API layer (RESTful, authenticated, monitored) that serves as integration point for AI-powered features.

Tech Stack: *.NET Core, Node.js, Elasticsearch, Docker, Kubernetes, Prometheus, Grafana*

Live: *talavest.com | my.talavest.com*

Lsevin — Medical Tourism Platform | Backend Developer

2024 – 2025 Remote

- Built multilingual, multi-role platform backend — architecture well-suited for AI-augmented patient matching and scheduling automation.
- Designed provider–patient data models enabling context-rich queries ideal for AI recommendation features.

Tech Stack: *.NET Core, PostgreSQL, Node.js, Docker*

Freelance | Developer & AI Tools Builder

January 2021 – October 2022 Remote

- Built web scraping and data aggregation systems — core data engineering skills applied to AI training data pipelines and knowledge bases.
- Developed real-time WebSocket systems — directly applicable to streaming LLM response delivery.

Tech Stack: *Python, .NET Core, Node.js, WebSockets, APIs*

Shaskam (TCI Contractor) | Senior Software Engineer

April 2021 – November 2023 Tabriz, Iran

- Built enterprise-scale workflow automation (BPMS, no-code form builders) — foundational experience for agent-driven process automation.
- Worked with large-scale structured data in Oracle/SQL Server — directly applicable to building AI knowledge bases and retrieval systems.

Tech Stack: *.NET Core, Oracle, SQL Server, Jenkins*

EDUCATION

Bachelor of Science — Computer Software Engineering

University of Bonab | 2013 – 2017
