PROFESSIONAL SUMMARY

Web3 Developer with a strong full-stack engineering foundation (8+ years) and hands-on experience in Solidity smart contract development, EVM-compatible chains, and blockchain API integration. Built and deployed a production cryptocurrency payment gateway with KYC verification and secure transaction flows. Understand both the Web3 layer (smart contracts, wallets, signing, events) and the Web2 backend that bridges it — enabling end-to-end DApp delivery. Experienced in building financial systems where security, auditability, and regulatory compliance are non-negotiable.

AREAS OF EXPERTISE

Solidity & Smart Contract Development	**EVM-Compatible Chains**	**DApp Frontend Integration**
Crypto Payment Gateways	**Web3.js & Ethers.js**	**Blockchain API Integration**
Token Standards (ERC-20/ERC-721)	**KYC / AML Compliance Systems**	**Backend APIs for Web3**
Security & Audit Awareness	**Fintech & Digital Asset Systems**	**Full-Stack DApp Development**

TECHNICAL SKILLS

Smart Contracts: Solidity, EVM Architecture, Hardhat / Foundry (familiar), Smart Contract Security Patterns
Web3 Libraries: Web3.js, Ethers.js, Wallet Integration (MetaMask), Contract ABIs, Event Listeners
Token Standards: ERC-20, ERC-721, ERC-1155
Backend / APIs: C#, .NET Core, Node.js — RESTful APIs bridging on-chain and off-chain data
Frontend: React, Next.js — DApp UI with wallet connection and contract interaction
Databases: SQL Server, PostgreSQL, Oracle — off-chain data storage for DApps
Security: KYC/AML workflows, transaction signing security, access control patterns, audit logging
DevOps: Docker, GitHub Actions, AWS — contract deployment and DApp hosting

WEB3 / BLOCKCHAIN HIGHLIGHTS

- Crypto Payment Gateway (Freelance): Designed and built a full production cryptocurrency payment system — smart contract interaction layer, secure transaction processing, KYC verification flow, and admin dashboard.
- Blockchain API Integration: Integrated on-chain data (transaction status, wallet balances, token transfers) into .NET Core and Node.js backends for real-time application state.
- Smart Contract Development: Written and tested EVM-compatible Solidity contracts covering token transfers, access control, and payment logic.
- Fintech Domain Expertise: 8+ years building financial applications (gold investment, payment gateways, KYC) — understanding regulatory and security requirements critical for Web3 finance.
- Wallet & DApp Integration: Integrated MetaMask and wallet connect flows into React/Next.js frontends with contract ABI interaction via Ethers.js.

PROFESSIONAL EXPERIENCE

Freelance | **Blockchain / Full-Stack Developer**

January 2021 – October 2022 Remote

- Designed and built a cryptocurrency payment gateway: Solidity smart contracts, Web3.js integration, KYC verification, and secure backend APIs.
- Integrated multiple blockchain APIs for transaction confirmation, wallet balance queries, and token transfer events.
- Built the full stack: smart contract layer → .NET Core API → React frontend dashboard.

Tech Stack: *.NET Core, Node.js, Solidity, Web3.js, Ethers.js, React, Oracle*

Talavest | **Full-Stack Developer (Fintech / Digital Assets)**

April 2025 – Present Remote | Tabriz, Iran

- Built and scaled a gold-backed digital investment platform — domain experience directly applicable to tokenized asset and DeFi systems.
- Designed secure financial transaction flows, wallet-like user accounts, and investment portfolio tracking.
- Built RESTful APIs for financial operations with authentication, authorization, and comprehensive audit logging.

Tech Stack: *.NET Core, React, Next.js, PostgreSQL, Docker, Kubernetes*

Live: *talavest.com | my.talavest.com*

Shaskam (TCI Contractor) | **Senior Software Engineer**

April 2021 – November 2023 Tabriz, Iran

- Built enterprise KYC/AML compliance APIs — identity verification, document validation, and regulatory reporting flows used at national scale.
- Security-first development with strict code review, audit trails, and access control — discipline directly applicable to smart contract security.

Tech Stack: *.NET Core, Oracle PL/SQL, SQL Server, Jenkins*

Lsevin — Medical Tourism Platform | **Full-Stack Developer**

2024 – 2025 Remote

- Delivered multi-role web platform with secure authentication, role-based access, and compliance-sensitive data handling.

Tech Stack: *.NET Core, React, Next.js, PostgreSQL, Docker*

EDUCATION

Bachelor of Science — Computer Software Engineering

University of Bonab | 2013 – 2017
